

Kuwait Petroleum International, LTD. (Q8)

Kuwait Petroleum International was established 1983, the international arm of **Kuwait Petroleum Corporation (KPC)**, under its distinctive “**Q8 sails**” logo, refines and markets fuel, lubricants and other petroleum derivatives to a diverse customer base across Europe.

KPI's network of more than 4,000 **Q8** branded service stations extends across seven European countries - Italy, Germany, Sweden, Denmark, Holland, Belgium and Luxemburg. **Q8** is at the forefront of developing forecourt retailing by expanding the range of goods and services offered – serving the needs of the local communities and motorists. In some markets this is through establishing partnerships with other companies – in the Benelux an alliance with supermarket chain Delhaize provides a complete "mini-supermarket" service. Opportunities to link up with other companies to provide, for example, dry-cleaning and fast food facilities, are actively sought where they bring a clear customer benefit.

Kuwait Petroleum International Lubes (KPIIL) produce and market lubricants under Q8Oils brand name. Basic raw material comes from **KPI** Europoort Refinery in Rotterdam (NL), where Kuwaiti crude oil is processed into some of the finest quality lubricant base oils available . These base oils are manufactured into finished lubricants at four blending plants to rigorous specifications set and monitored by **KPI's** independent research arm, Kuwait Research & Technology (KPR&T). Today, **KPI** market approximately 380,000 Barrels/day of products per day in Western Europe through more than 4,000 retail stations, and operates its own refinery in the Europort and jointly with AGIP in Milazzo. Currently, The company is also looking into further international expansion in the near and Far East.

The IT Department of **Kuwait Petroleum North West Europe** has been looking for a product that could report "who has which file and folder access" on their Windows file servers. Mainly for auditing reasons and for management reporting in order to be able to (periodically) verify the correct data access security for users and groups to the companies data areas.

Several products have been reviewed and tested and NetSec EPR proved to be the only available product that met all of the following requirements:

- can report the effective file and folder - user and group access rights
- can present reports in CSV format to be imported into other environments (Excel/SQL)
- can create reports “Where has User XY Access to?” AND “Who has which Access to Folder XY?”.
- easy to install & use
- fair pricing
- full support

During installation and testruns it proved that the amount of data results was to large to handle directly. Thanks to the excellent and prompt support of NetSec a solution was rapidly found and Enterprise Reporter now worked perfectly.
